

Please note: this brochure is not completely up-to-date, and does not fully reflect the new ownership situation after the sale of Unimerco to Kyocera.

INSIGHT INTO A WORKPLACE

In Unimerco, we approach the challenges and opportunities of globalization by constantly adapting. If we are to ensure positive development we must prepare for new demands and conditions, and be ready for the challenges of the future. New markets, new technology and new products offer a range of exciting opportunities if we are adaptable and willing to learn new things.

We must continue to become better in order to stay competitive. That requires us to invest and renew ourselves, but the main precondition is that we have the best, most competent and flexible employees. Therefore, we constantly focus on strengthening the team with new profiles who can make us even better and who are willing to make an extra effort to enable us to achieve even better results.

On the following pages, you can read about some of the fundamental elements which, in our opinion, make us a different company, one in which enjoyment and human values go hand in hand with competitiveness.

If you would like to know more, you can find more information at www.unimerco.us.

A handwritten signature in black ink, which appears to read "Kenneth Iversen". The signature is fluid and cursive, with a long horizontal stroke at the end.

Kenneth Iversen
Chief Executive Officer

A good team with ambitious goals

Renewed progress

If Unimerco was to be described in just a few words, 'adaptability' and 'innovativeness' would not be far off. These are the characteristics which have helped us change a large deficit caused by the global financial crisis into a good profit – in just one year.

The means to achieve this included a critical evaluation and streamlining of all working processes, as well as development of new products and services.

Adapting to the new reality has required many initiatives and great adaptability, but we have also learned a lot along the way. Therefore, we are now able to take advantage of the growth potential in current as well as future markets, and it looks as if this year could give us the best result in all of Unimerco's history.

We are very much aware of the global economy being unpredictable, but we stopped speaking of the crisis a long time ago. Instead, we constantly assess the situation in order to create new development and progress from the existing basis. The objective is to strengthen our position as an internationally recognized developer and manufacturer of cutting tools. This process places great demands on the individual employee to be flexible, adaptable and prepared to make an extra effort.

We always focus on putting together the right team and constantly stimulating and further developing individual employees in order to improve our collective competencies. When strengthening the team, we are thorough and professional. New employees must have the necessary qualifications to raise the existing level and become significant players within the team.

Products and services

Cutting tools include, for example, drills, milling cutters and thread cutting tools, used in machining centers, e.g. car factories and furniture factories. These products are sold directly to industrial companies around the world.

Toolholders are various systems designed to fix tools firmly in the machines. The toolholders are central to the overall runout and thus the machining quality. These products often form part of a total cutting tool solution.

Measuring tools are used to check and optimize the quality of the machined workpieces. Measuring tools include all types, from hand-held measuring tools such as calipers to digital 3D measuring machines and advanced software programs for data collection and processing.

Read more about cutting tools, toolholders and measuring tools at www.unimerco.us

Tools for fastening include nailers, finish nailers, staplers, compressors, re-bar tiers and machines for driving T-nuts, as well as a wide range of fasteners and accessories. Primarily sold on the Danish market through DIY retailers and exported to the rest of Scandinavia, Germany, Switzerland and the UK.

Read more about fastening tools at www.unimercofastening.com

Quality, knowledge and customer focus

In the main, we are concerned with three product areas: cutting tools and toolholders, measuring tools and tools for fastening.

We have spread our business activities over several branches and a large number of markets so as to limit the effect of any negative developments that might occur in individual markets or product groups. This provides us with more stable earnings and strengthens our financial foundation.

The individual product groups vary, both in terms of size and geographical spread. What they do have in common, however, is that they are quality products which, along with our advice and guidance, can maximize production for the customers and thus reduce their costs.

Within all three main product groups we offer total concepts based on extensive knowledge and competencies.

As a problem solver and provider of total solutions, our overall knowledge and experience benefit our customers.

Our systematic working methods help to ensure that our customers enjoy the best possible production conditions. The advice and guidance often include several parts of the production process, such as choice of tools, process order and optimization of machining parameters, including cutting speed, pressure and conveying speed.

Our customers include companies such as Audi, Saab, Skoda, Ford, Airbus, Sauer Danfoss, Vestas, Eaton, Danfoss, Tvilum Scanbirk, Swedwood, Velux, Siemens and Danish Crown.

The UM FIRST DP™ hogger is specially developed for edge-machining of chipboard.

Tooling Aerospace		Tooling FPG (Food, Plastic, Graphic)	
Tooling Automotive		Tooling Woodworking	
Tooling Fluid power		Tooling Metrology	
Tooling General machining		Fastening Construction	
Tooling Power generation / Energy sector		Fastening Contractors' equipment etc.	

We target our efforts on specific segments within those industries that work with machines and components: automotive, aerospace, fluid power, power generation, wood/furniture and food. Our highly customer-oriented strategy means that we are required to possess know-how on both tools and machinery and also on our customers' end products so that we can recommend the ideal tooling solution in each individual case.

Development and global growth

UNIMERCO Inc., Michigan, USA

Fastening tools

Unimerco was founded as a trading company by Hans Foxby in 1964. During the first years, the product range consisted of Tjep gun nailers and nails. The nails were purchased from a French company which also made deliveries to the American company Paslode (now ITW).

Following a trip to the USA, Hans Foxby returned home with a contract as sole agent for Paslode nailers and nails in Scandinavia. The contract became the foundation of Unimerco's focus on fastening tools, which remain an important part of our business activities. These products are now mainly sold under the Tjep brand.

Cutting tools

In 1966, we came into contact with Leuco, a manufacturer who makes tools for the woodworking industry. Through a sole agent agreement for Leuco's products in Denmark, the product range was expanded to include tools for use in finishing by shaping and cutting.

In order to counter the effects of the building crisis in the late 1970s, we further accelerated the activities within the area of cutting tools.

Local trading and service company

During the 70s and 80s, service became an important activity because customers demanded regrinding of the cutting tools sold by Unimerco.

We purchased our first grinding machine and started a collection service for tools needing regrinding in the area.

National producer, distributor and service company

Our activities spread over an ever-increasing geographical area, while the machine park and product range expanded. Soon, we were also providing a service to the metal and food industries and to the graphical trade.

At the start of the 90s, construction and manufacture of customized tools became Unimerco's way to secure the most profitable production for our customers. During the same period of time, the range was expanded to include measuring tools supplemented by calibration service.

International advisory producer, distributor and service company

In 1991, we set up a sales company in Sweden as a first step in our strategy towards becoming an international group. In the course of the 90s, we set up businesses in the USA, Norway

Companies founded and acquisitions:

- 1964 UNIMERCO A/S, Denmark
- 1991 UNIMERCO AB, Sweden
- 1995 UNIMERCO Inc., USA
- 1996 UNIMERCO AS, Norway
- 1998 UNIMERCO Ltd., UK
- 1998 Establishment of UNIMERCO GROUP A/S, Denmark
- 2000 Acquisition of Dandia Industriadamater, Denmark and Schwarz-Dandia GmbH, Germany
- 2003 Acquisition of UM TRIION A/S, Denmark
- 2003 Acquisition of Nordisk Kartro, Denmark
- 2003 Acquisition of Danskær Ikast A/S, Denmark
- 2004 Acquisition of the tooling and grinding activities at Lind Maskiner A/S, Denmark

UNIMERCO Ltd., Wuxi

- 2004 Acquisition of PEGOMA AB, Sweden
- 2004 Acquisition of Bevini GmbH, Germany
- 2005 Establishment of UNIMERCO Ltd., China, Wuxi office
- 2005 Establishment of UNIMERCO s.r.o., Czech Republic
- 2006 Establishment of UNIMERCO Ltd., China, Beijing office
- 2007 Establishment of UNIMERCO Sp. z o.o., Poland and UNIMERCO Oy, Finland
- 2008 UNIMERCO A/S split into UNIMERCO FASTENING A/S and UNIMERCO TOOLING A/S
- 2008 Establishment of UNIMERCO GmbH, Hungary, and UNIMERCO Inc., Brazil
- 2008 Acquisition of Derek Walmsley, UK – now UNIMERCO WALMSLEY
- 2010 Establishment of production facilities in Wuxi, China

and the United Kingdom. The expansion, together with a major strengthening of our product range, led to a significant increase in revenue and a doubling of the number of employees during this period of time.

Based on the product range of cutting tools, the international growth increased focus on new customer segments, primarily within the aerospace, telecommunications and wind turbine industries.

Global tooling specialist and optimization partner

Through services such as consultancy and customer training, Unimerco has made itself known as a professional partner with a wide range of competences who helps manufacturing companies towards a more effective production.

Unimerco has a lot of expertise in the development and production of tools for optimizing complex and costly production runs. Thus, our products can create value for global businesses within a range of industries.

While many customers are moving parts of their production to low-wage countries, Unimerco sets up companies close to the customers to be able to serve them as well as possible.

Stable growth

In 2008/09, the financial crisis led to a reprioritization of the activities in some of our companies. That has contributed to Unimerco still being a financially stable and well consolidated business.

The long-term growth philosophy is based on the desire to achieve stable progress where revenue and earnings continue to improve, thereby strengthening our foundation. At the same time, the growth must secure a high quality of life for employees and owners.

The goals should be achieved primarily through organic growth, but also by possible acquisitions of companies that can provide us with fresh know-how and increased revenue. As well as this, we will have a presence in the places where the best conditions for industrial growth can be found, and where our customers set up business. For this reason, our global expansion and spread will continue.

Geography and key figures

Unimerco at a glance

As an essential part of a controlled global expansion, we have made acquisitions and established new businesses, so the group today is made up of companies in ten countries: Denmark, Sweden, Norway, Finland, Germany, United Kingdom, Czech Republic, Poland, USA and China.

Added to that, we have sales units in Iceland and Hungary, and we export to a wide range of other countries throughout the world.

The opening of our first sales office in China in 2005 represents a milestone in Unimerco's history. In 2010, the then 3 sales offices in the country were supplemented by a facility for production and service of tools, which constitutes an important platform for future growth in the region.

In 2008, we acquired the company Derek Walmsley (now Unimerco Walmsley) in England. The company specializes in advising and supplying especially inserts and related tool solutions to the industrial market in the UK, including the aerospace, off-shore and medical industries.

One year of being subject to a financial crisis does not change the overall picture of Unimerco's development:

- From 1992 until today, pre-tax revenue has more than trebled, while equity has increased more than fivefold.
- During the same period, the number of employees has risen from 240 to 530, of which 335 work at the main office in Denmark.
- 75 % of all employees in the group own shares in Unimerco.
- Short term sickness absence in the Unimerco Group lies at 1.1%.
- Every year, we receive around 5,000 visitors.
- Our main office in Sunds, Denmark, has an area of 22,000 m², with no segregation between production, storage and administration.
- The Unimerco Group has the highest credit rating (AAA) and is ISO 9001, ISO 14001 and EMAS certified.

The right team

Open surroundings promote communication (Unimerco A/S, Denmark)

We give responsibility to those who have the competency

We ensure dynamism and proficiency in the decision-making process throughout the whole organization by maintaining a flat structure, where decisions and responsibility, to the greatest possible extent, are delegated to employees who have the relevant competency. What this means in practice is that we make pronounced use of self-governing groups and cross-organizational cooperation at all levels.

Good working conditions combined with co-ownership, job security, profit sharing and influence are important elements increasing the sense of responsibility, adaptability and flexibility among everyone in the company.

In connection with recruitment, we set great store by offering a thorough introduction to the company, so applicants receive the necessary insight to allow them to decide whether they wish to become a part of our business culture.

New employees will go through an in-depth induction program covering all company departments. This gives a professional and cultural insight and a good idea of how the individual functions contribute to the integral whole.

Therefore, new players quickly become a natural part of the team. In order to handle the tasks in the best possible way, new employees also receive job-specific training and education in the individual departments.

We are constantly working to improve ourselves, e.g. by strengthening employee competencies through on-the-job training, further education and inter-company placements.

Professional and personal development plays its part in raising the level and ensuring a higher degree of innovation in solving tasks.

At the same time, it increases the individual employee's qualifications in terms of taking on additional and perhaps bigger tasks within the organization. Our overall flexibility is increased if our employees are prepared to adapt. At the same time, we do not find ourselves trapped between narrow demarcation lines.

High technology and specialist knowhow contribute to creating a great place to work

In Unimerco, career steps are sideways as often as upwards. We also have many examples where managers have made room for new talent and then taken on other roles themselves in the company.

This constant generational change ensures, on the one hand, that valuable knowledge stays within the company, and, on the other, that valued employees can still feel challenged and inspired.

We encourage employees to constantly improve their knowledge. We regard it as a positive trait that employees are aware of their own career aims and wishes, and it has become part of our culture for employees to take the initiative themselves towards further education.

In general, the number of resignations is very small, also in times when job mobility in the labour market is greater than today. We also find that employees who have tried pastures new for a while find their way back to us. Several times each year, we welcome back former colleagues who have been away for a shorter or longer period.

The roofed village

Unimerco's buildings are constructed as "roofed villages" without any partitioning of office staff and the workshop floor. In practice this means that there are no walls between the departments.

For example, the Danish head office is one big 22,000 m² building where production, stock and administration all work side by side – and many of Unimerco's companies are laid out similarly. The interior has been inspired by the typical village where everybody knows everybody and also knows the role of each individual person.

Interior arrangements, co-ownership and profit sharing underpin the feeling of belonging and community. Our production environment is clean, light and air-conditioned. Working conditions like these are found only rarely in industrial workplaces.

The unhindered communication and short decision-making processes promote a uniquely innovative environment, where knowledge is shared across all functions and skill sets.

Read about how our employees experience a "good day at work" at www.unimerco.us

Commitment and community

Work across departments

We share responsibility and reward

In Unimerco, it is a fundamental thought that through our joint efforts we all create the values, and therefore everyone should also share the results.

In order to mark the immediate connection between effort and reward, we have had a monthly profit-sharing scheme since 1977. The amount payable is the same for everyone throughout the whole group and at present is 10 % of the previous month's profit.

In addition to profit-sharing, the employees are also offered the chance to buy shares in the company, which is 100 % employee-owned. Employees in the group's companies hold exclusive rights to becoming shareholders. The shares must be sold when resigning or retiring. 75 % of the employees of the group throughout the world have taken up the offer.

Once every year, the shares from resigned employees are offered for sale. Thus, the share scheme helps secure a continuous generational change. The aim is to give everyone the opportunity of being a part of it, and therefore new employees have first priority when shares are being exchanged.

The thinking behind co-ownership is that it makes competent and loyal employees more committed to, and more interested in, all aspects that make up running a business. In this way, the individual employee feels the responsibility, the dilemma and the joy of being a company owner, shareholder and salary earner.

Management and employees share an interest in making the company develop positively and achieving good results, since, in many cases, they "are on the same side of the table".

By virtue of our ownership structure, all employees receive information at "owner level". The information includes, for example, daily revenue figures, information meetings every other month and monthly information concerning financial key figures, special initiatives, strategies and development plans.

The open office and production environment, where management is also located, ensures free-flowing communication. Along with a high level of information, it gives our employees an insight into the business and an understanding of how it works.

An international and inspirational atmosphere

Profit sharing and co-ownership

The inspiration for Unimerco's profit sharing and ownership model originally came from CEO Kenneth Iversen's childhood in the fishing environment in Thyborøn, Denmark.

A widespread model for share fishermen at the time was one whereby half the ship's catch went to the crew in accordance with a specific pattern of division. The rest went towards the maintenance of the ship and on fuel, insurance, interest and depreciation etc.

If a crew member did not participate in the fishing, he would not be paid. This provided a strong incentive to go to sea and make a good catch. When the skipper turned 55-60 years of age he would sell 40-50 % of the vessel to his first mate and then sell the remainder around the time he turned 65. The first mate would often continue the same course. The predictable ownership model created security for the remaining crew in terms of the generational change.

Example:

Over the years, the employees who have become co-owners have accumulated significant fortunes which would not normally be possible for salary earners.

A tooling technician retired when he turned 61, after 30 years' employment at UNIMERCO. Apart from his pension plan, he was able to take with him a capital gain of £118,000. That is the equivalent of having an additional income – every year for 30 years – of £3,900. This equals £330 per month in addition to his salary.

Read more about our share scheme at www.unimerco.us

Equal treatment

- *All 530 employees are salaried employees. Around half are tool technicians (machine workers, toolmakers etc.) who are directly employed in production. The remainder are employed in tool construction, IT, stores, kitchen, property, sales, administration and management.*
- *For more than 25 years we have had equal pay for equal work functions.*
- *Salary increases are based on a percentage increase which is, as a rule, equal for everyone at the same employment level.*

Whole lives

The staff clubs in Unimerco offer something for every taste.

Community – also in spare time

Employees across departments and job functions often meet up to enjoy common pursuits in their spare time. Employees take the initiative in establishing new clubs and organizing events, but Unimerco provides financial support. So the clubs mirror the current interests of the employees at Unimerco.

The clubs are good forums for employees who share common interests. Therefore, the clubs are yet another manifestation of the community spirit underpinning understanding and communication across professional boundaries, thus benefiting day-to-day cooperation.

When Unimerco invites employees for Christmas lunches and summer parties, the standard is high, with gourmet food and fine wines.

In order to strengthen the sense of unity in the individual departments, it is possible for each department to go on a “steakhouse outing” a couple of times a year, which apart from the meal also includes guided tours and activities such as go-karting, ice hockey, golf, clay-pigeon shooting, etc.

Also, two departments might go on an outing together, and this serves to reinforce team spirit and an appreciation of one another’s job situations. No particular occasion is required for such an event; they are a chance for the employees to enjoy one another’s company outside normal work hours.

Informal communication in an open environment

A good framework for a good workday

We try to create a workplace where everyone wants to be every day and make a big effort. We therefore do a lot to create the best-possible working environment, both physically and psychologically.

The workplace features an open interior arrangement with a natural inflow of light and green plants, all of which make the workplace a comfortable place to be. We believe that people are more motivated to do a good job and be good colleagues if they feel good about themselves and their surroundings.

Real joy in our work rubs off on the customers and generally means that the individual employee feels much more responsible for the company as a whole.

To the extent possible, Unimerco makes sure that the employees are offered good and healthy food. Therefore, the companies in Denmark and the USA are equipped with restaurant facilities where everyone gathers for joint culinary experiences.

All employees have personal access cards and many visit Unimerco outside office hours, for example to show family and friends where they work.

We get involved – even when things are difficult

We know our colleagues and have real commitment to their enjoyment. We do not sit there passively if we see signs that all is not as it should be. This also means that we try to help find a solution when employees are not thriving or when they report in sick. Help may take the form of legal assistance, for example, or psychological help, all depending on the needs of the employee.

Of course, all of this requires many resources, but we regard it as a natural part of our efforts to create a good workplace as a vital part of a good life.

Taking a stand

Cooperation in a bright and open environment

Quality, environment and honesty

Unimerco's fundamental attitudes and values are perhaps most evident in our conduct towards employees, owners and the surroundings. We would like to contribute with good examples and attitudes without forfeiting the objectives of running a company. High standards of morality mean that we always strive to be decent people and that our attitudes are matched by what we do in practice. Naturally, this also applies to our business ethics in relation to customers and suppliers.

Our concepts and products are built on quality, which we understand to mean maximum suitability, long durability, high precision, good finish and good design. High quality is also of importance for the environment, as it helps ensure lower consumption of materials.

When we develop customized tools, the objective is always to make existing work processes more effective, and this

leads to considerable resource savings. With RE•NEW® we regrind our customers' old tools to make them perform as well as when they were new. This service also benefits the environment by reducing the need for new tools.

Our planned growth must always take environmental aspects into account – no matter where in the world it takes place. Similarly, our focus on a good working environment does not depend on geographical location. For example, our recently established production facilities in China feature airconditioning and air extraction, which is no matter of course in that part of the world.

As a workplace, we actively participate in the social debate, are open about our attitudes and live up to them in practice. We are active participants in the local community and have a fund which supports aims of use to the general public, such as cultural and sports arrangements.

The coolant/lubricant system at Sands

Coolant/lubricant system

Previously, our machines each had their own system of coolants and lubricants, which frequently had to be refilled or exchanged. Today, all machines are supplied from one system, which is centralised and computer-controlled, thus automatically pumping the synthetic coolant/lubricant to the machine and back again after use.

The dirty water from the grinding workshop is filtered off several times, so that iron filings, dust and particles can be sorted. The iron filings sorted out are sold to be used again. The lifetime for the coolant/lubricant is approx. three years per vessel, whereas before it was one year at most. In the Unimerco laboratory, a daily test of the grinding fluid is carried out. This close monitoring of the fluid means that only a few additives need to be used in the tanks. That provides for the best possible conditions for the work environment.

A great place to work

Among the best workplaces in Europe

Every year, Unimerco participates in the "Best Workplaces in Europe" competition, organised by the Great Place to Work® Institute. The main focus of the competition is human relations in the workplace, more specifically the elements "credibility", "respect", "fairness", "pride" and "camaraderie".

Unimerco has been selected as one of the 100 best workplaces in Europe seven times.

Naturally, we are happy with and proud of the results. However, the main reason for participating in the competition is that it gives us a good survey of how our employees feel. Therefore, we follow up on the results, and we see the survey as a supplement to the ongoing work of creating and maintaining a really attractive workplace.

When skilled employees are happy and satisfied, the result is the best customer service, which ultimately benefits the competitiveness of the company.

Respect, pride and camaraderie are some of the values characterizing a great place to work.

A good day at work

People can't really get it, until they see it

Brandy fell in love with the company, when she saw the job ad in the newspaper. "It was a huge impressive ad, and the job description was exactly what I was looking for," she remembers.

The fact that it was a foreign company was something she did not give much thought to at first. "But it began to open my eyes to the rest of the world. Maybe it was my age, but I didn't think much about what was going on in the rest of the world before that time," she admits.

Some of the unique features Brandy likes about the company are the restaurant, which provides the staff with meals two times a day, and the open lay-out of the factory where the production, the administration and even the President are located in one big room.

Brandy Kristensen

If I can grow, the company grows

"When I went to school, I went there to play with my friends. This is how I feel about working in Unimerco. I don't mind getting up in the morning, because I am going to meet my friends," John says.

John has been working in machine shops since he was 16 years old, and he is quite certain when he claims: "Unimerco is the best company, I have ever worked for."

He started there in 1999, before the company moved from Ann Arbor to new facilities in Saline.

John has gone through some training at the headquarters in Denmark, but much of the education takes place at the machines, where he has learned from more experienced colleagues. "And I still learn a little every day," he says.

John Schuck

A long-term relationship

Ron has been with Unimerco Inc. since 1998. One of the advantages of his work at Unimerco is that he has a lot of freedom in his daily doings, and an influence on his job as well.

"If I have an hour or two where I have nothing to do because the machine is running, I will ask my colleagues, if there is anything I can do to help them. To me it gives much more variation to have different things to do, he says."

Ron's career in Unimerco has not been "straight forward".

"It has been more sideways, and is has made me able to deal with more areas all over the factory, he says."

He describes Unimerco as a long-term-minded company.

"At Unimerco people are encouraged to find new challenges inside the company, if they want to. The philosophy is that it is better to hold on to people and the knowledge they have built up."

Ron Orr

UNIMERCO Inc.

UNIMERCO Inc. manufactures, distributes and services tools for machining, primarily for the metal, automotive, aerospace, fluid power and woodworking industries. The tooling concept comprises standard and customized tools, RE-NEW® tool maintenance, coating and optimization guidance. The American company was established in 1995. Today, the company has product development, production, sales and administration in Saline, Michigan. The company is part of UNIMERCO GROUP with companies in Europe, the USA and Asia.
