

Add value to
your bed design

Make your bed design unique

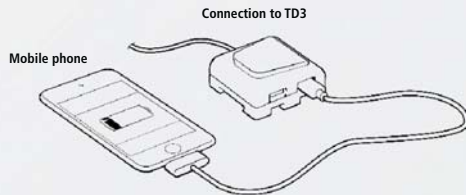

- and add value for the end-user via the TWINDRIVE® accessories

With the TWINDRIVE® accessories from LINAK you can realise your dreams and make your bed design unique.

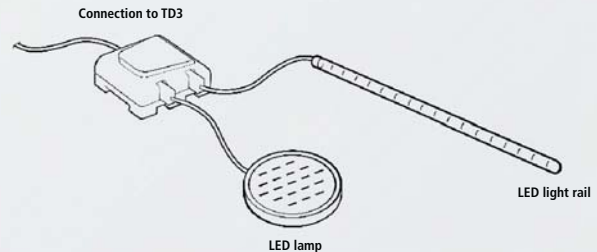

Common for all accessories are that they have been designed to add value to your bed via extended combination possibilities. They are compact units only taking up limited space. Another feature is the optimised mounting possibilities either via screws to mount on the bed frame or simply directly on the TD3 via the groove. Furthermore, if you need more boxes they can be stacked on top of each other.

USB connector example

DC connector example

USB connector

The USB connector opens the door to the world of accessories with an USB plug. Just connect your unit and it can be operated via the standard handset. Or simply connect your mobile phone and charge it via the USB connector.

LED Lightbox

- brings light to your bed.

Just connect and you can switch the light on and off via your handset. The soft light ensures enough light to lead the way and be able to get out of bed at night without disturbing other people.

DC connector

The box makes it possible to connect any standard unit with a DC plug, e.g. a LED light rail, which can then be switched on and off via your standard handset.

LINAK hardware

The TD3 TWINDRIVE® system is the most complete and modular system for leisure beds available on the market. Especially developed to comply with the need for more force in beds and adding more value on the bed for the end-user.

TD3 dual actuator

LED lightbox

DC connector

HB10RF handset

HB20RF handset

LA27 actuator

MD1 massage motor

Battery box

Mains cables

The improved force of the TD3 gives you a high flexibility on the choice of mattress. With the TD3 you get a system with power fit for even stiff box spring mattresses.

The TD3 is built on an intelligent, modular platform. Besides the high lifting capacity, RF based handsets, extra channel for actuators

or massage and the exchangeable mains cable which all comes as standard, the TD3 system also offers the possibility to modify or upgrade software. This can be done by means of a computer software program called a configurator. With this platform and accessories from LINAK,

the door is open for combining a wide range of standard articles for further options. Your creativity and these features give you the necessary flexibility to meet the requirements of users. Want the full demonstration? Contact your local LINAK team for further information and demonstration.

With the ZERO™ technology, LINAK® has reduced the standby power consumption on systems with mains cut-off to an incredibly low maximum of 0.1 W

TERMS OF USE

The user is responsible for determining the suitability of LINAK products for a specific application. LINAK takes great care in providing accurate and up-to-date information on its products. However, due to continuous development in order to improve its products, LINAK products are subject to frequent modifications and changes without prior notice. Therefore, LINAK cannot guarantee the correct and actual status of said information on its products. While LINAK uses its best efforts to fulfil orders, LINAK cannot, for the same reasons as mentioned above, guarantee the availability of any particular product. Therefore, LINAK reserves the right to discontinue the sale of any product displayed on its website or listed in its catalogues or other written material drawn up by LINAK.

All sales are subject to the Standard Terms of Sale and Delivery for LINAK. For a copy hereof, please contact LINAK.
